Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

This is a "working draft" sequence. It currently
ts of 33 contigs. The true order of the pieces
Known and their order in this sequence record is
ary. Gaps between the contigs are represented as
f N, but the exact sizes of the gaps are unknown.
econd will be updated with the finished sequence
as it is available and the accession number will
served.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          3: contig of 36023 bp in length

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

* NOTE: This is a 'working draft' sequence. It currently

* consists of 5 contigs. Gaps between the contigs

* are represented as runs of N. The order of the pieces

* is believed to be correct as given, however the sizes

* of the gaps between them are based on estimates that have

provided by the submittor.

* This sequence will be replaced

* by the finished sequence as soon as it is available and

* the accession number will be preserved.

* This sequence will be replaced

* the accession number will be general to the preserved.

* This sequence will be implied by the submittor.

* This sequence will be implied to the preserved.

* This sequence will be will be preserved.

* This sequence will be unknown length

* 71268 71367: contig of 2302 bp in length

* 71268 94779: gap of unknown length

* 122321 122320: gap of unknown length

Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            10102: contig of 10102 bp in length

The sequence may be contaminated with foreign sequence from E.coli, yeast, vector, phage, etc.
The nucleotide sequence of this BAC clone was generated by combining Monsanto and Genoscope sequencing data.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ij

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       consists of 5 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

This sequence of P0698H10 clone has an overlap with P0518C01 (DDBJ: AP003277) clone at the position 1 to 80,700 of 5' end and with P0459B04 (DDBJ: AP003627) at the position 103.851 to 153,449 of 3' end. Detailed information on overlap and assembly quality together with annotation of this entry is available at http://rgp.dna.affrc.go.jp/GenomeSeq.html.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            /protein_id="BAB89859.1"

Genes were predicted from the integrated results of the following: GENGCANI.0, BLASTNZ.0 as well as SplicePredictor (October 1998 version). The genomic sequence was searched against (KED://ncbi.nlm.nih.gov/blast/db) and the CDNA sequence database at (Etp://ncbi.nlm.nih.gov/blast/db) and the CDNA sequence database at NCBI NonRedundant Protein database with BLASTDZ.0, ESTS represent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             the identified CDNA Sequences using BLASTN 2.0 with the corresponding DDBJ accession no. and RGP clone ID.

A gene with identity or significant homology to a protein is classified based on the protein name to indicate the homology level such as same name, 'putative-' and '-like protein.' A gene without significant homology to any protein but with EST homology (covering almost the entire length of partial sequence) is classified as an 'unknown' protein. A gene predicted with a gene prediction program is classified as a 'hypothetical' protein.

The orientation of the sequence is from SP6 to T7 of the PAC clone.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              mRNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CDS
                                                                                                                                                                                                                                                                                                                                                                                           Genes were identified by a combination of several methods: Gene prediction programs including Genscan and Genscan+ (Chris Burge, http://ccr.081.mit.edu/GENSCAN.html), GeneMarkHMM (Mark Borodovsky, http://genemark.biology.gatech.edu/GeneMark/), Figenesh (http://genemark.biology.gatech.edu/GeneMark/), Figenesh (http://www.softberry.com/), and GeneSplicer (Mihaela Pertea and Steven Salzberg, contact mpertea@tig:.org), searches of the complete sequence against a peptide database and the plant EST database at TIGR (http://www.tigr.org/tdb/tgishtml). Annotated genes are named to indicate the level of evidence for their annotation. Genes with similarity to other proteins are named after the database hits. Genes without significant peptide similarity but with EST similarity are named as unknown proteins. Genes without protein or EST similarity, that are predicted by more than two gene prediction programs over most of their length are annotated as hypothetical proteins. Genes encoding tRNAs are predicted by protein surel. edu/eddy/tRNAscan-SE/). Simple repeats are identified by repeatmasker (Arian Smit, http://encome.maki.ar.edu/eddy/tRNAscan-SE/).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      complement(join(<26795 . 26803,27038 . 27076,27396 . 27443,

Submitted (21-DEC-2001) Indian Initiative for Rice Genome Submitted (21-DEC-2001) Indian Initiative for Rice Genome Sequencing, Department of Plant Molecular Biology, University of Delhi South Campus, New Delhi, Delhi 110021, India Research Program; Rennondai 2-1-2, Tsukuba, Ibaraki 305-8602, Japan Rosearch Program; Rannondai 2-1-2, Tsukuba, Ibaraki 305-8602, Japan * NOTE: This is a 'working draft' sequence. It currently * consists of 5 contigs. Gaps between the contigs * are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes * of the gaps between them are based on estimates that have * provided by the submitter.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       HTG 21-DEC-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Eukaryota, Viridiplantae, Streptophyta; Embryophyta; Tracheophyta; Spermatophyta; Magnollophyta; Liliopsida; Poales; Poaceae; Ehrbartoideae; Orgyzae Oryzae.

On May 8, 2002 this sequence version replaced gi:18767489.

* NOTE: This is a 'working draft' sequence. It currently

* consists of 9 contigs. Gaps between the contigs

* are represented as runs of N. The order of the pieces

* is believed to be correct as given, however the sizes

* of the gaps between them are based on estimates that have

* provided by the submittor.

* This sequence will be replaced

* by the finished sequence as soon as it is available and

* the accession number will be preserved.

* 1 10515: contig of 10515 bp in length

* 10616 23647: contig of 10515 bp in length

* 23548 36771: contig of 13024 bp in length

* 36872 44539: contig of 13024 bp in length

* 44440 44539: contig of 2668 bp in length

* 44440 44539: contig of 2602 bp in length

* 44640 72241: contig of 2002 bp in length

* 44640 72241: contig of 2002 bp in length

* 44640 72241: contig of 2002 bp in length

- Web: www.genoscope.cns.fr)

On Jul 29, 2002 this sequence version replaced gi:19715885.

IMPORTANT: This sequence is unfinished and does not necessarly represent the correct sequence.

Work on the sequence is in progress and the release of this data is based on the understanding that the sequence may change as work continue. The sequence any be contaminated with foreign sequence from E.coli, yeast, vector, phage, etc.

The nucleotide sequence of this BAC clone was generated by combining Monsanto and Genoscope sequencing data.

* NOTE: This sequence will be replaced

* This sequence will be replaced

* The finished sequence as soon as it is available and

* the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CNSO7YPX
